## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11- 21 are rejected, as understood, under 35 U.S.C. 103(a) as being unpatentable over Herzberg (U.S. Patent No. 4,893,618).

Herzberg discloses a system comprising a chassis (23) and one or more fixation elements (12) in the form of screws or pins. The fixation elements are to be received in a bone structure and are screwed into the chassis and bone structure in such a way that screws move equidistantly in the chassis and the bone structure to produce a force neutral form. There are also no axial forces transferred to the screws after fixation. The chassis is received in a rigid bracing (24) wherein the chassis is made of two parts received displaceable in an axial direction in relation to each other in the bracing that cap is formed between the two chassis parts (21 and 23). This device is placed at a distance from and not in contact with the underlying bone structure or skin. The chassis is fixed to both sides of the fracture whereby a bridge span is formed between bone fragments of the bone. Herzberg discloses the claimed invention except for the chassis being made of ultra high molecular weight polyethylene or the bracing being made of steel. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have created the chassis with ultra high molecular weight

polyethylene or the bracing rod of steel, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.

### ***Response to Arguments***

Applicant's arguments filed September 7, 2006 have been fully considered but they are not persuasive. Applicant states Herzberg does not disclose fixation elements that are received in the chassis and are locked in place by friction. Since the pins are placed into bone, friction causes the pins not to come out of the bone therefore keeping the bone fracture locked in place.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
